BACK TO SQUARE ONE

SIMPLY DECLARATIVE INTERACTIVE DATA COMPONENTS

DEclarative
Interactive Data
Components

SIMPLE DECLARATIVE INTERACTIVE DATA COMPONENTS

SIMPLE DECLARATIVE INTERACTIVE DATA COMPONENTS

**SIMPLE
DECLARATIVE
INTERACTIVE DATA**

COMPONENTS

A COMPONENT'S RESPONSIBILITY:

DATA → DOOM

PERFORMANCE?

VIRTUAL DOM

1. When something could have changed, re-render everything to a new DOM-representation
2. Diff new output with previous output
3. Update only what has changed

A black and white photograph showing a group of soldiers in camouflage uniforms working in a flooded field. They are carrying large sandbags on their shoulders and backs. One soldier in the foreground is carrying a large sack over his shoulder. Another soldier is kneeling in the water nearby. The background shows a vast, flooded landscape with utility poles and trees in the distance.

RENDER

to create output

DIFF

compare output

BATCH

calculate minimal changeset and batch

```
var ReactDOMElement = {  
  type : string,  
  props : {  
    children : ReactNodeList,  
    className : string,  
    etc.  
  },  
  key : string | boolean | number | null,  
  ref : string | null  
};
```

COMPONENTS

```
var Example = React.createClass({  
  render: function() {  
    return (Virtual DOM-nodes)  
  }  
});  
  
React.render(Example(), document.body);
```

CREATING VIRTUAL DOM NODES

```
React.createElement('div', { className: 'ninja' }, 'Hello World!');
```

```
<div class="ninja">  
  Hello World!  
</div>
```

FULLY OPTIONAL (BUT YOU'LL WANT IT)

```
render: function() {  
  return React.createElement('div', null, 'Hello World!');  
}
```

is equal to

```
render: function() {  
  return <div>  
    Hello World!  
  </div>;  
}
```

IN THE BUILD PIPELINE

CONVERTING JSX TO JS

```
var Example = React.createClass({  
  render: function() {  
    return <div>  
      Hello World!  
    </div>  
  }  
});  
  
React.render(<Example/>, document.getElementById('main'));
```

```
var Example = React.createClass( {  
  render: function() {  
    return React.createElement('div');  
  } } );  
  
React.render(<Example />, document.getElementById('main'));
```

WHY WON'T THIS WORK?!

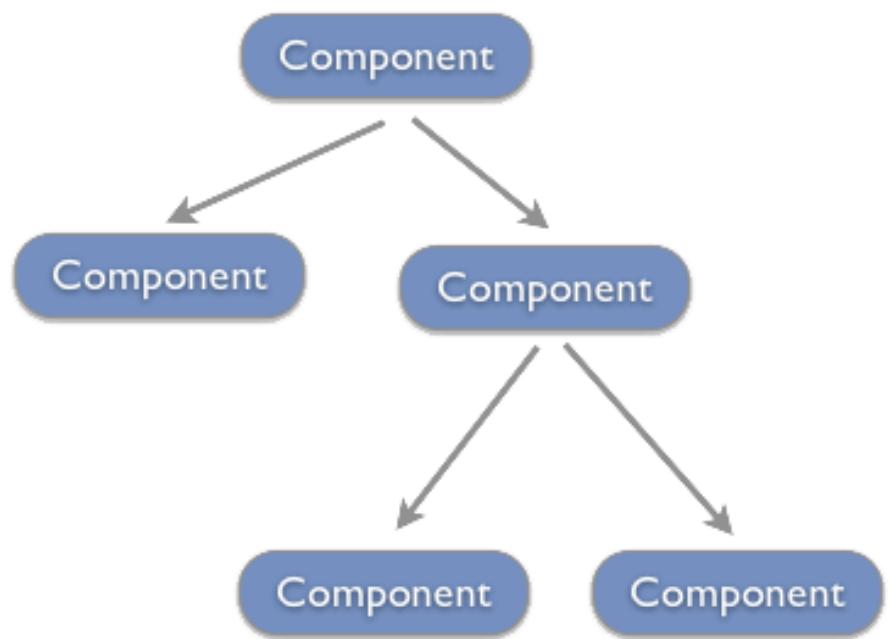

```
var HelloWorld = React.createClass({  
  render : function() {  
    return <span>hello</span><span> world!</span>;  
  }  
});
```

```
var HelloWorld = React.createClass({
  render : function() {
    return React.createElement('span', null, 'Hello ')React.createElement('span', null, 'World!');
  }
});
```

CUSTOM COMPONENTS

```
var RootComponent = React.createClass({  
  render: function() {  
    return <section>  
      <FancyHeader />  
      <AwesomeContent />  
    </section>;  
  }  
});
```

Components may consist of native HTML or custom components

A scenic landscape featuring a large body of water, possibly a lake or sea, with distant hills or mountains visible across it. In the immediate foreground, there are several large, leafless trees with intricate root systems exposed, suggesting a coastal or island environment.

LET'S TALK ABOUT DATA

PROPS & STATE

PROPS

immutable
passed down to comp from parent

STATE

changes over time
lives in a component

PROPS

```
var Comment = React.createClass({  
  render: function() {  
    return <div>  
      {this.props.name} says: {this.props.text}  
    </div>;  
  }  
});  
  
React.render(<Comment  
  name="Weeb1"  
  text="Hello Bob"/>, document.body);
```

```
var Counter = React.createClass({
  getInitialState: function() {
    return { count: 0 };
  },
  increment: function(event) {
    this.setState({ count: this.state.count + 1 });
  },
  render: function() {
    return (
      <p onClick={this.increment}>
        You clicked this {count} times.
      </p>
    );
  }
});
```

```
React.render(<Counter />, document.body);
```

ONE-WAY DATA FLOW

Rob: Ok so my first email address...

I don't want you to do anything changing credits for your work though karl?

Karl Jane

11:32pm

The flashback bits will have more speech and stuff in them I just but FLASHBACK to save on time - like the bit where Amy is shot will have her playing and then getting shot and the dad breaking down

Yeah that's why I repeated it because she's trying to remember also yeah copy to your blogs 😊

Leah Galea-Bateman

11:34pm

its really good 😊 okay then

Karl Jane

11:35pm

I made Amy's ghost have a massive wound to the head because of the gunshot so we didn't have to use a child voice actor because her voice is distorted- Does that seem clear enough like when Katherine screams "Her face"?

Leah Galea-Bateman

11:36pm

yeah, i understood that bit

Karl Jane

11:36pm

Good 😊 I wasn't sure how clear it was

Leah Galea-Bateman

11:38pm

yeah, so we'll go to the library tomorrow and make sure we get it all done 😊 and get lots of technical codes in it too

Rosie Alloway

11:39pm

yes good plan, although ellis isn't in tomorrow so it might have to be tuesday? unless we just do it without hi and he can add his say on tuesday?

Leah Galea-Bateman

REUSABILITY

```
var CommentBox = React.createClass({  
  render: function() {  
    return <div className="commentBox">  
      <h1>Comments</h1>  
      <CommentList />  
      <CommentForm />  
    </div>;  
  }  
});
```

LIFECYCLE EVENTS:

```
function componentDidMount() {...}  
function componentWillMount() {...}  
function componentWillUnmount() {...}  
function componentWillUpdate() {...}  
function componentDidUpdate() {...}  
...
```

LIFECYCLE EVENTS

```
var Program = React.createClass({  
  componentDidMount: function() {  
    this.setFocusOnInputField();  
  },  
  componentWillUnmount: function() {  
    this.removeEventListeners();  
    this.doCleanup();  
  }  
});
```

PERFORM!

```
shouldComponentUpdate: function(nextProps, nextState) {  
  return (whether component should render() or not)  
}
```

PERFORM!

```
shouldComponentUpdate: function(nextProps, nextState) {  
  return nextProps.id !== this.props.id;  
}
```

FLEXIBILITY

Easy to use React on parts of an app

```
render(<Example/>, document.body);
```

SERVER-SIDE RENDERING

```
var app = express();

app.get('/', function (req, res) {
  React.renderToString(Timer(), function(markup) {
    res.send(markup);
  });
});
```

- » Flux handles the rest

A dense, dark forest scene with tall trees and foliage. The lighting is low, creating deep shadows and highlights on the leaves.
